SECTION 5. FIRE FIGHTING MEASURES-----

EXTINGUISHING MEDIA: SPECIAL FIRE FIGHTING

Dry chemical, carbon dioxide, and foam.

PRECAUTIONS:

Wear self-contained breathing apparatus (SCBA) and personal protective equipment to prevent contact with skin

and eyes.

UNUSUAL FIRE OR EXPLOSION HAZARDS:

Vapor may travel considerable distance to source of ignition and flash back. Heat will build pressure and may rupture closed containers. Forms explosive mixtures in air. Keep containers cool with water spray.

SECTION 6. ACCIDENTAL RELEASE PROCEDURES -----

Evacuate Area.

Eliminate all ignition sources.

Wear self-contained breathing apparatus (SCBA), rubber boots, and heavy rubber gloves. Avoid eye or skin contact. Cover with dry absorbent material and collect in closed container for disposal using non-sparking tools. Ventilate area and wash spill sites after material pickup is complete, rinse with water. All clean up should be carried out in accordance with federal, state, and local regulations. If required proper authorities should be notified.

SECTION 7. STORAGE AND HANDLING PRECAUTIONS-----

STORAGE:

Store in tightly closed container in a cool environment away from

direct sunlight.

HANDLING:

Keep away from heat, sparks, and flames.

Do not breathe vapors.

Use only with mechanical exhaust.

Do not contact with skin, eyes, and clothing.

Severe eye irritant.

Avoid prolonged or repeated exposure.

Wear heavy rubber gloves.

Wash with soap and water after handling. Have safety shower and eye wash available.

SECTION 12. ECOLOGICAL DATA-----

As cyclopentanone:

Data not available.

As Propylene glycol methyl ether:

It has a low potential to affect aquatic organisms, a high potential to biodegrade with unacclamated microorganisms from activated sludge, a low potential to affect secondary wasted treatment microbial respiration, a low potential to persist in the environment, and a low potential to bioconcentrate.

The direct instantaneous discharge to a receiving body of water of an amount of this chemical which will rapidly produce, by dilution, a final concentration of 250 mg/l or less is not expected to cause adverse environmental effects.

Oxygen Demand Data:

Acute Aquatic Effects Data:

ThOD: 1.95 g oxygen/g COD: 1.84 g oxygen/g

48-h EC-50 (daphnia): 23,300 mg/L

BOD-20: 1.14-g oxygen/g

96-h LC-50 (fathead minnow): 20,800 mg/L

Biodegradation: A 28 day test for ready biodegradability using unacclamated microorganisms showed 73.4% degradation of the test article as measured by carbon dioxide evolution and a loss of dissolved organic carbon.

Secondary Waste Treatment Effects: A 3 hour activated sludge respiration inhibition test showed an EC-50 of >1000 mg/L.
